

YEAR ROUND SOFFIT LIGHTING

Are you considering
or have you installed
year-round lighting for
your home or business?

CITY OF
Lethbridge

There are a few things our Building Inspection Services team want you to know about installing these lighting systems, often referred to as soffit lighting.

While some systems may be marketed as safe to install yourself or for installation by your local handyman, there are a few regulations that need to be followed for the safety of you and your home/business:

- 1** An electrical permit is required;
- 2** The installation needs to be done by an electrical contractor with a City of Lethbridge business license; and
- 3** If already installed, an approved/passed electrical inspection report is required.

If you have questions or concerns about any of this information or the soffit lighting system, our Building Inspection Services team are ready to help!

Call 311 during business hours and you'll be directed to one of our knowledgeable inspectors.
